SUMMARY

Software Engineer with experience building **AI-powered applications** and **backend systems**. Hands-on experience integrating **LLMs and RAG pipelines** into **production workflows** while debugging backend services and building **scalable applications**.

EDUCATION

Vellore Institute of Technology
Bachelor of Technology (B.Tech), Computer Science and Engineering

Oct 2022 – Jun 2026
CGPA: 8.80/10.0

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript, SQL

AI & LLM Tools: RAG, Vector DBs, Prompt Engineering, Open-Source LLMs (Llama, Mistral), Hugging Face

Developer Tools & Tech: React.js, Next.js, Node.js, Express.js, REST APIs, Git, GitHub, AWS, JIRA, Postman

EXPERIENCE

American Chase
Software Engineer

Mar 2026 – Present
Indore, MP

- Fixed a **serverless deploy failure** caused by extensionless relative imports that local tooling resolved but Node's native **ESM loader** rejected. Added **.js** extensions across **37 backend modules** and verified by reproducing the production runtime locally
- **Traced intermittent missing data** in production to a provider refresh started at module scope but never awaited, letting the serverless invocation return before hydration finished. Made the refresh a shared promise that data routes await.
- Resolved **5+ backend issues** in a Node.js/Express application by debugging APIs and improving application logging for easier troubleshooting.
- Worked on an **AI assistant** for the client side operations team with senior engineers, contributing to implementation and testing across the feature.

PROJECTS

Cortexa Remote Interview Platform | *React.js, Next.js, Node.js, TypeScript* | [\[GitHub\]](#)

May – Jul 2025

- Built a full-stack video interviewing platform utilizing a strong **software engineering foundation**, featuring real-time video calls and an interactive code editor supporting **4 languages** including **Python** and **C++**.
- Developed robust backend workflows and **API integrations** for live coding capabilities, focusing on writing readable, testable code and ensuring secure session management without leaking sensitive data.
- Designed a scalable scheduling system with **calendar integration**, applying an **evaluation mindset** to write simple test cases validating user roles and data synchronization across the platform.

RakshaChakra - Secure Mobile Banking | *Python, Machine Learning, AWS, Flutter* | [\[GitHub\]](#)

Jun – Jul 2025

- Developed a **Python-based** fraud detection backend, evaluating machine learning models against expected behavior and achieving **92% accuracy** in identifying suspicious transactions.
- Implemented a cloud-based behavioral analytics system on **AWS EC2**, demonstrating a solid grasp of data pipelines and real-time monitoring for enhanced application security.
- Built on-device ML processing to keep **95% of sensitive data local**, maintaining strict privacy standards parallel to **data safety** requirements.

ACHIEVEMENTS & CERTIFICATIONS

- **TCS CodeVita 2025:** Ranked in Top 5% (4,811 / 100,000), demonstrating algorithmic problem-solving speed and accuracy under competition conditions.
- **Canara Bank Suraksha Hackathon 2025:** Top 105 teams from 4,000+ participants, showcasing teamwork and the ability to build secure, data-centric systems.
- **IBM Gen AI Certification:** Completed training in generative AI technologies, demonstrating curiosity and practical exposure to **LLM primitives**, **prompting techniques**, and exploring the **LLM training pipeline**.
- **Smart India Hackathon 2024:** Participated in national hackathon, demonstrating **learning velocity** by rapidly prototyping innovative technological solutions and experimenting with external APIs.
