SUMMARY

Backend-focused Software Engineer building **REST APIs** with **Node.js/Express** and **Django REST Framework** on **PostgreSQL**. Experienced in **debugging production issues** in serverless deployments, designing **multi-tenant APIs**, and shipping tested code through **Docker** and **CI**

EDUCATION

Vellore Institute of Technology **Oct 2022 – Oct 2026**
Bachelor of Technology (B.Tech), Computer Science and Engineering *CGPA: 8.80/10.0*

TECHNICAL SKILLS

Programming Languages:	C++, Python, JavaScript, SQL
Backend & Databases:	Node.js, Django, Django REST Framework, PostgreSQL, REST APIs
Frontend:	React.js, HTML5, Tailwind CSS
DevOps & Cloud:	AWS, Docker, GitHub Actions
Testing & Tools:	pytest, Postman, Git, GitHub, JIRA

EXPERIENCE

American Chase **Mar 2026 – Present**
Software Engineer - Full time *Indore, MP*

- Restored a failing **serverless production deploy** by adding **.js** extensions to imports across **37 backend modules**, after tracing the failure to Node's native **ESM loader** rejecting extensionless paths that local tooling accepted.
- Eliminated **intermittent missing data** in production by making a provider refresh a **shared promise** that data routes await, after tracing it to an un-awaited call that let **serverless** invocations return before data loaded.
- Diagnosed a **schema-validation defect** by tracing **3 failing unit tests** to a reversed **set-difference** operation, identifying the incorrect error-field reporting and verifying the fix across a **16-test** suite.
- Worked on an **AI assistant** for the client-side operations team with senior engineers, **contributing to implementation** and **testing** across the feature.

PROJECTS

Lattice - Multi-Tenant Content Engine | *Python, Django (DRF), PostgreSQL, Docker* | [GitHub] [Live] **Sep – Oct 2026**

- Built a **multi-tenant headless content engine** where organizations define content types at runtime. Entries are stored as **JSONB** and validated against immutable, **versioned JSON Schemas**, so new content types need no code changes or migrations. Deployed the **Dockerized** backend on Render behind a Vercel proxy.
- Enforced **tenant isolation** with membership checks on every organization-scoped route and database-level unique constraints. Implemented **JWT auth** in httpOnly cookies, hashed and revocable **API keys**, and **rate limiting**, covered by **50+ pytest tests** run in **GitHub Actions CI** against Postgres on every push.
- Load-tested locally with **k6** on **100k entries**, then made list queries **150x faster** (46 to 0.3 ms) with a **PostgreSQL composite index** and cut queries per page from **54 to 4** by fixing an **N+1** query problem. One worker now serves **150 req/s** error-free.

RakshaChakra - Behaviour-Based Authentication | *Python, Flask, REST APIs, AWS* | [GitHub] **Jun – Jul 2025**

- Implemented a behavioral analytics backend using **Python Flask** and **AWS EC2**, exposing APIs for **risk prediction**, user onboarding and **model retraining**, with a pipeline scoring **25+ behavioral features** per session.
- Load-tested locally with **Locust** and added a per-user cache with **ETag**-based invalidation in place of per-request S3 downloads, raising throughput from **27 to 101 req/s** and cutting p50 latency from **3.5 s to 140 ms**.
- Fixed a **race condition** causing intermittent **HTTP 500s** during retraining with per-user **file locks**, and moved 8–18 s training jobs to **background processes**, cutting predict latency under mixed load from **2 s to 38 ms**.

ACHIEVEMENTS & CERTIFICATIONS

- **TCS CodeVita 2025: Top 5%** of 100,000+ participants (**Rank 4,811**).
- **Canara Bank Suraksha Hackathon 2025: Top 3%** (Top **105** of **4,000+** teams).
- **LeetCode:** Published **90+ solution write-ups** with **50K+ views** from the community.
- **Gen AI Using IBM watsonx** – IBM Career Education Program (Apr 2025) **[Credential]**
