SUMMARY

Software Engineer with a strong foundation in **C++**, **OOP**, and full-stack development, building **AI-powered applications** and developer tools. Possesses high learning velocity through shipping side projects and hackathons. Familiar with **LLM primitives** (tokens, embeddings), **Transformer architecture**, and experimenting with **open-source LLMs** (Llama, Mistral). Capable of building basic **RAG pipelines**, applying structured **prompting techniques**, and writing testable code with a strong **evaluation mindset** to monitor expected behavior and safety.

EDUCATION

Vellore Institute of Technology
Bachelor of Technology (B.Tech), Computer Science and Engineering

Oct 2022 – Jun 2026
CGPA: 8.80/10.0

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript, SQL

AI & LLM Tools: RAG, Vector Stores, Prompt Engineering, Open-Source LLMs (Llama, Mistral), Hugging Face

Developer Tools & Tech: React.js, Next.js, Node.js, Express.js, REST APIs, Git, GitHub, AWS, JIRA, Postman

EXPERIENCE

American Chase

Mar 2025 – Present

Software Engineer

Indore, MP

- Developed an LLM-powered document workflow using **OpenAI API** and **LangChain**, automating key-field extraction and saving **2 hrs/week** for a US operations team.
- Resolved **5+ production defects** in a Node.js/Express backend, reducing recurring issues by **35%** through root-cause analysis and improved logging.
- Integrated a **RAG pipeline** into an internal business tool, enabling natural language search across **200+ documents** and reducing lookup time from **5 mins to under 2 mins**.
- Contributed to the delivery of **2 AI-assisted workflow features**, collaborating with US stakeholders from requirements gathering through production rollout.

PROJECTS

Cortexa Remote Interview Platform | *React.js, Next.js, Node.js, TypeScript* | [\[GitHub\]](#)

May – Jul 2025

- Built a full-stack video interviewing platform utilizing a strong **software engineering foundation**, featuring real-time video calls and an interactive code editor supporting **4 languages** including **Python** and **C++**.
- Developed robust backend workflows and **API integrations** for live coding capabilities, focusing on writing readable, testable code and ensuring secure session management without leaking sensitive data.
- Designed an scalable scheduling system with **calendar integration**, applying an **evaluation mindset** to write simple test cases validating user roles and data synchronization across the platform.

RakshaChakra - Secure Mobile Banking | *Python, Machine Learning, AWS, Flutter* | [\[GitHub\]](#)

Jun – Jul 2025

- Developed a **Python-based** fraud detection backend, evaluating machine learning models against expected behavior and achieving **92% accuracy** in identifying suspicious transactions.
- Implemented a cloud-based behavioral analytics system on **AWS EC2**, demonstrating a solid grasp of data pipelines and real-time monitoring for enhanced application security.
- Built on-device ML processing to keep **95% of sensitive data local**, maintaining strict privacy standards parallel to **data safety** requirements.

ACHIEVEMENTS & CERTIFICATIONS

- TCS CodeVita 2025:** Ranked in Top 5% (4,811 / 100,000), demonstrating algorithmic problem-solving speed and accuracy under competition conditions.
- Canara Bank Suraksha Hackathon 2025:** Top 105 teams from 4,000+ participants, showcasing teamwork and the ability to build secure, data-centric systems.
- IBM Gen AI Certification:** Completed training in generative AI technologies, demonstrating curiosity and practical exposure to **LLM primitives**, **prompting techniques**, and exploring the **LLM training pipeline**.
- Smart India Hackathon 2024:** Participated in national hackathon, demonstrating **learning velocity** by rapidly prototyping innovative technological solutions and experimenting with external APIs.
